

sauna & steam

Tylö Sense Combi Elite Heaters

Sense Combi Elite is our very latest combi heater. Our combi heater differs from a conventional sauna heater, as it has a built-in water tank, which gives you access to both a traditional dry sauna and a steam sauna. giving you a dry sauna, wet sauna and steam in a single heater. The heater has both standby mode and "divided output" to make your sauna experience energy efficient. In addition, it includes our new and most innovative Elite control panel which takes your sauna and steam bath to a whole new level. Choose between 6.6, 8 and 10,5 kW of power and between wall mounted or upright heater with legs as an option. With three different power sizes, Sense Combi Elite is suitable for a sauna room from 4 up to 18 m³.

A steam sauna means a lower temperature and significantly higher humidity, resulting in a soft and very pleasant form of sauna bath. Liven up your sauna bath by also adding fragrant natural herbs or liquid essences.
